

**MEXICO:** Drier weather (5-10 mm, with isolated amounts greater than 25 mm) prevailed across the main corn belt, reducing moisture supplies for corn. Dry weather dominated northwestern and north-central Mexico. Moderate showers (10-50 mm) fell along the lower Rio Grande Valley. Widespread showers (25-100 mm) boosted moisture supplies across southeastern Mexico (Yucatan Peninsula, southern Veracruz, and Tabasco). Temperatures averaged 1 to 3 degrees C above normal across most of Mexico.
